CALAMUS FOUNDATION (\$CLMF)

Official Tokenomics & Economic Model

CoreObjective: Establish a decentralized, NATO-aligned ecosystem linking real-world defense innovation, AI-managed hedge-fund automation, and tokenized gold/silver reserves through the \$CLMF token.

1. Overview

Token Ticker / Name

\$CLMF

Calamus Foundation

Total Supply

108,000,000

Utility & Governance Token

Base & Multi-Chain

SAFO Blockchain

ETH & BSC Support

2. Token Utility

Access Rights

Required for entry to the AI-Traded Defense Hedge Fund, RWA DEX, and Innovation Bid Platform.

Fee Medium

Primary payment for DEX, Perpetual, Bid, and Innovator fees, with built-in holder discounts.

Governance Power

Voting power = $\$CLMF \text{ Holdings} \times \text{NFT multiplier}$ (up to 3x for Tier 3 NFTs).

NFT Collateral

Used to mint or purchase NFT access keys. 25% of Tier-2 NFT sales are split for buyback & burn and treasury funding.

Revenue Share

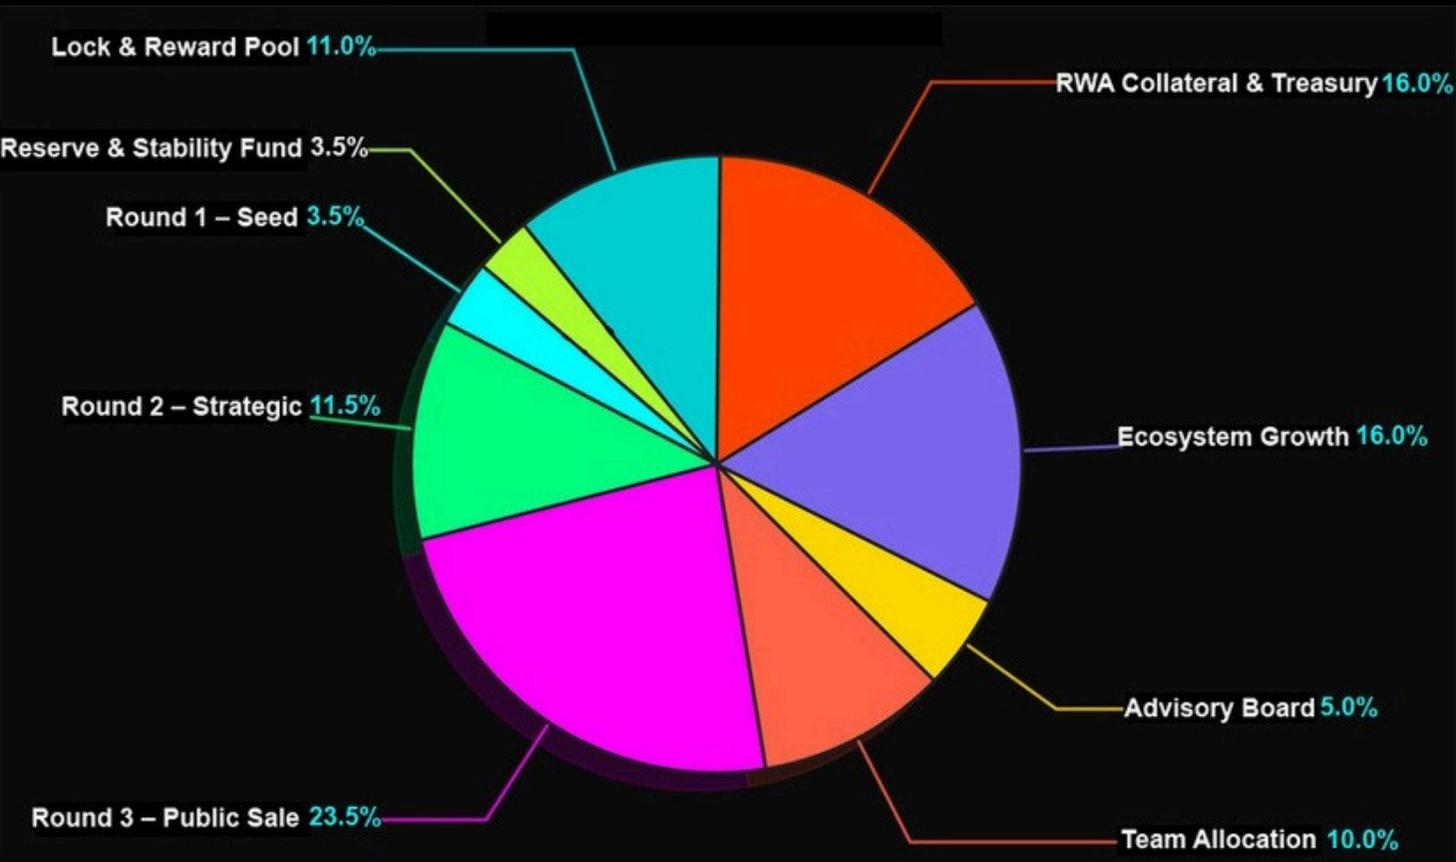

Distributed only to Funding Round 1-3 investors and NFT holders (not general token holders).

Arbitrage & Deflation

Profits from SAFO ↔ ETH ↔ BSC bridge flow into Treasury. Buyback & Burn is activated only by governance vote.

3. Supply Token Allocation (108M \$CLMF)

- Round 1 – Seed
- Round 2 – Strategic
- Round 3 – Public Sale
- Ecosystem Growth
- RWA Collateral & Treasury
- Lock & Reward Pool
- Team Allocation
- Advisory Board
- Reserve & Stability Fund

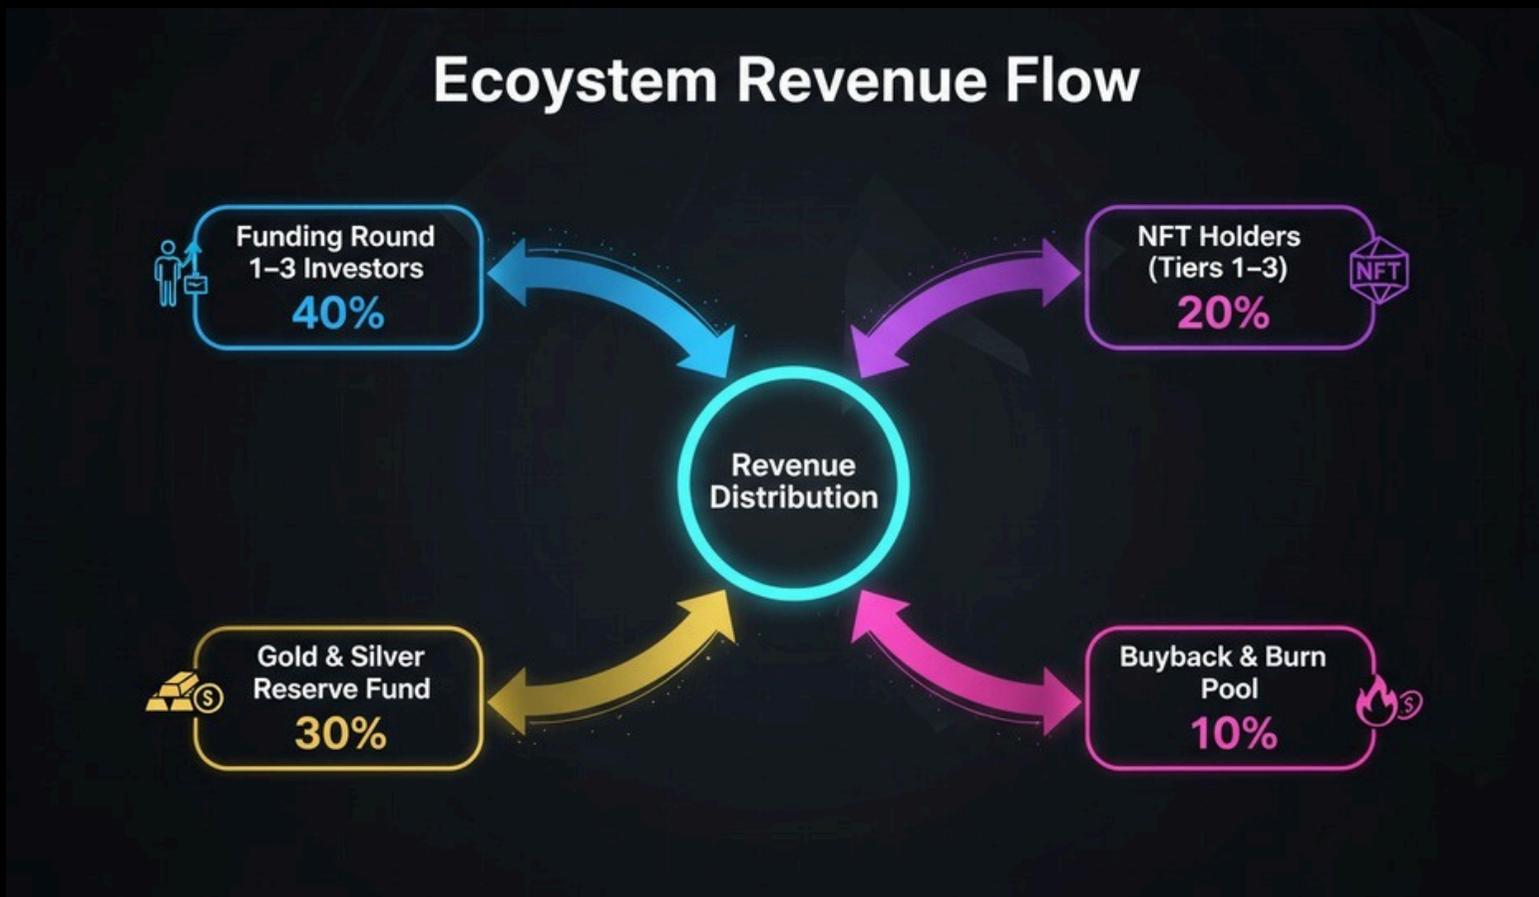

CATEGORY	ALLOCATION %	AMOUNT (TOKENS)	LOCK / RULE
Round 1 – Seed	3.5 %	3,780,000	—
Round 2 – Strategic	11.5 %	12,420,000	24 months mandatory (20% TGE + 80% linear)
Round 3 – Public Sale	23.5 %	25,380,000	—
Team Allocation	10.0 %	10,800,000	Goal-based unlocks via governance polls
Advisory Board	5.0 %	5,400,000	Contract-based vesting
Ecosystem Growth	16.0 %	17,280,000	—
RWA Collateral & Treasury	16.0 %	17,280,000	—
Lock & Reward Pool	11.0 %	11,880,000	Covers mandatory + optional locks
Reserve & Stability Fund	3.5 %	3,240,000	—

4. Revenue Distribution

Ecosystem Revenue Allocation

RECEIVER	% OF REVENUE
Funding Round 1-3 Investors	40 %
NFT Holders (Tiers 1-3)	20 %
Gold & Silver Reserve Fund	30 %
Buyback & Burn Pool	10 %

5. Collateral & Treasury Logic

- At least 30% of all ecosystem revenues purchase physical gold and silver, tokenized as RWA collateral.
- Treasury receives bridge arbitrage profits and a fixed share from Tier-2 NFT sales.
- Any Treasury or Reserve release requires an on-chain DAO vote.
- Tier multipliers (T1=1×, T2=1.5×, T3=3×) apply to both voting and revenue-weight ratios

Locks (Rewarded in \$CLMF)

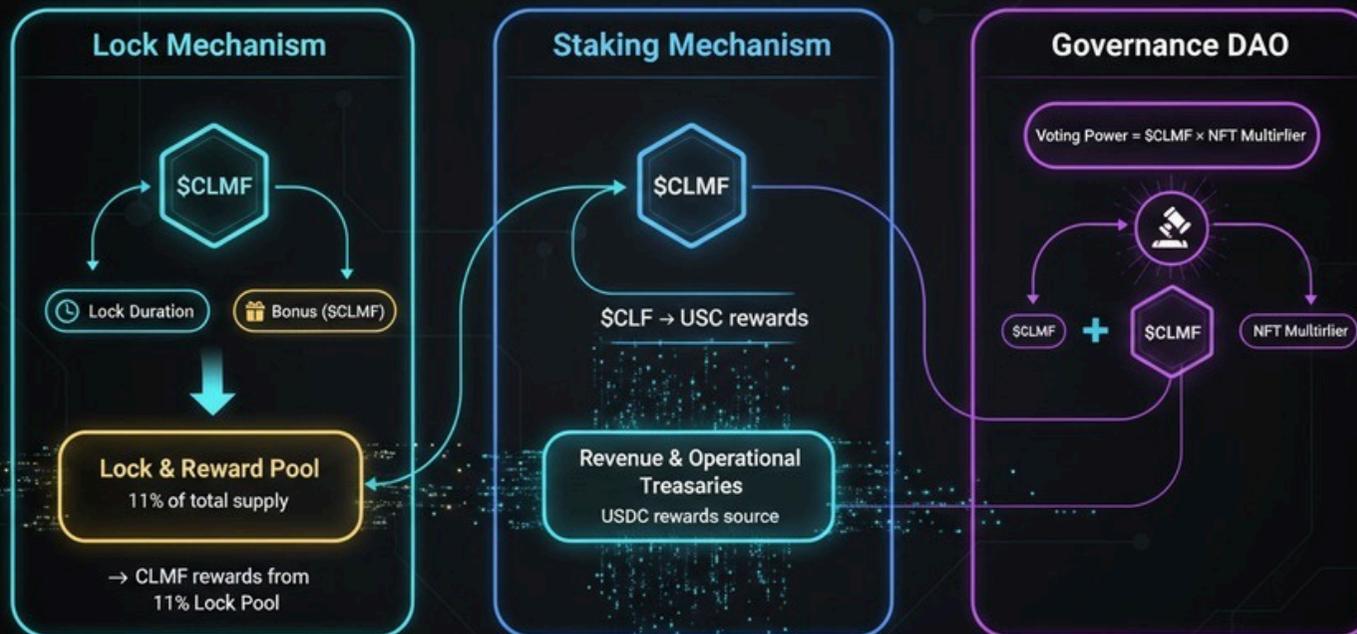

Funded from the dedicated 11% Lock & Reward Pool.

LOCK DURATION	BONUS (\$CLMF)
3 months	6 %
6 months	12 %
12 months	24 %
24 months	48 %

Governance Integration

- Locked \$CLMF = weighted voting power × NFT multiplier.
- Staking does not increase governance weight.
- USDC staking rewards are approved quarterly by DAO poll.

Lock & Reward System

Staking (Rewarded in USDC)

Reward Currency: USDC (Inflation-free, revenue-backed).

Duration: Flexible (1–6 months). **Annual Yield:** ≈ 8–18 %.

7. RWA Token Airdrop

5% of every new innovation token supply is airdropped to \$CLMF investors based on round:

Seed Investors (R1)	25 %
Institutional (R2)	35 %
Public/Presale (R3)	10 %
Treasury Reserve	30 %

8. Governance & Deflation

Key Governance Controls

- \$CLM F holders with NFT tier multipliers govern major decisions.
- Governance controls: team token releases (goal-based), Treasury & Reserve allocations, buyback & burn triggers, ecosystem fund deployments, and protocol updates.
- Deflationary logic: no new minting; lock rewards are pre-allocated; regular burns reduce circulating supply.

Deflationary Logic

- Revenue → Distribution → Reserve → Governance →
- Innovation → Airdrop → Buyback & Burn
- Protocol updates
